

## About OraCoat Xylimelts

OraCoat Xylimelts are fully-dissolving oral adhering discs whose active ingredients, Xylitol and cellulose gum, are slowly released in the mouth. They provide hours of discreet relief as the ingredients coat, moisturize, lubricate, soothe and stimulate saliva flow.\* Xylimelts also release calcium carbonate to neutralize acids to support oral health.\* Plus, Xylimelts adhere strongly to teeth and gums, so they can be safely used while sleeping. When dry mouth is worst. They can also be used with CPAP machines and dentures.

## About Xylitol, the key ingredient in Xylimelts

Xylitol is a natural food substance that coats the mouth and may reduce the risk of tooth decay. A natural sweetener, it is comparable to sucrose in sweetness but contains fewer calories and fights cavities.

\*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

## Benefits of Xylitol (500mg):

**Increases saliva flow** which not only keeps your mouth moist, but helps maintain healthy teeth and reduces bad breath.\*

**May reduce risk of tooth decay.** Frequent use of candy with sugar or starches to relieve dry mouth promotes tooth decay. Xylitol does not promote and may reduce the risk of tooth decay.

**Coats, moisturizes, and lubricates\***  
Other benefits have been reported in published literature. Visit [www.xylitol.org](http://www.xylitol.org) for more information about xylitol.

## Adhering disc technology:

- The tan, dimpled side discreetly sticks to gums or teeth
- No effect on talking or appearance
- Stays in place, safe for use during sleep
- Allows use while sleeping when saliva flow is lowest for the most effective delivery of xylitol for caries control

## Xylitol delivery:

- Keeps mouth moister, longer\*
- Reduces the risk of tooth decay

## Directions for Use:

1. Place a disc at the gum line on the outside of a molar, upper or lower, with the white side touching your cheek and the tan adhesive side against your gums and/or teeth.
2. Use your tongue to push the disc to a comfortable spot. Once there, do not push with your finger or touch with your tongue for 10 seconds, as this will disrupt adhesion which grows stronger over time.

**While sleeping:** Use two (2) discs, placing one on each side of the mouth. Some people find one disc at a time is enough.

**Daytime:** Use as needed.
